

Carburation in Theory and Practice, Including a Criticism of Carburettor Development: A Manual of Reference for Automobile Engineers and Owners (Classic Reprint)

Excerpt from Carburation in Theory and Practice, Including a Criticism of Carburettor Development: A Manual of Reference for Automobile Engineers and Owners. The subject of carburation is one which is vital to the automobile movement and has, therefore, received more scientific attention during the past few years. This has been necessary on account of the demands of the public for wide ranges of engine speed, controllability, and quietness. The author has been unable to discover much scientific book work dealing with this subject, with the exception of that very useful book of Sorels upon the subject of alcohol motors. There is, undoubtedly, a considerable interest taken, both by automobile engineers and owners, in the carburettor question, and this has been much greater recently on account of the increased price of fuel.
