

Circular Work in Carpentry and Joinery

This is a practical guide to the circular work of single and double curvature and is a new edition of the 5th London edition of 1911. The book is re-edited and annotated with drawings to give clear, easily understood explanations of the entire field of curved work which traditional joiners are likely to encounter. The book includes a look at mouldings, angle brackets, cased frames, elliptical heads, conical roofs and skylights, windows and solid-headed frames.
