

Instrumentation in Structural Concrete Engineering

Provides information to those designing, developing plans, and collecting data from instruments and devices measuring behavior on, or embedded within structural concrete. Instruments described include those installed for the measurement of strain, stress, joint movement, pore pressure, interior concrete temperature, uplift pressure, leakage, structural deflection, head loss, and distance measurement. Chapter titles are ... (1) Introduction ... (2) Transducers ... (3) Uplift and Leakage ... (4) Plumbing Instruments and Tilt-Measuring Devices ... (5) Crack and Joint Measuring Devices ... (6) Precise Measurement Systems ... (7) Temperature Measurement ... (8) Seismic Instrumentation ... (9) Instrumentation Automation Techniques ... (10) Appendix.
