

Specifications and drawings of patents relating to electricity issued by the U. S. Volume 26

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1884 Excerpt: ...finger-keys for separating the circuit-controllers can also be more readily manipulated. A three-arm chandelier is shown; but it is evident that the same features can be employed in a chandelier having only two arms, or in one having four or more arms. It might in some cases be desirable to have one circuit-controller on the chandelier for turning off and on all the lights simultaneously. This could be accomplished by placing a circuit-controller in the line of one of the main wires before it reaches the branching plate or the chamber in the top of said head containing the binding plates and safetycatch, such parts being accessible from the top of the chandelier, and being hidden when the head is turned into the ceiling-block, substantially as described and shown. In an electrical chandelier, the combination, with the

central box or case inclosing the connections, of a removable cover of insulating material, through which the stems of the circuit-con...
