

## Engine Performance: Tape 14 - OBD II System Diagnosis (Part 2)

Our all-new Automotive Engine Performance and Diagnosis Video Series offers viewers an extraordinarily complete introduction to must-know topics, including: ignition, fuel, emissions, and computerized-engine controls. Conveniently organized into four sets of four tapes each, all VHS videos in this series use a powerful combination of live action, computer animations, and precision graphics to explain key engine performance concepts and outline step-by-step diagnosis and repair procedures. The first set of four videos familiarizes viewers with the major functions of the ignition system, showcasing distributor-based and distributorless ignition systems. Procedures for diagnosing no-start, driveability and emissions problems, and performing appropriate ignition system tests are also outlined in detail. The second set of four tapes examines procedures for testing, diagnosing, and repairing fuel/air induction systems, while the third set shifts attention to emissions and related systems. The final set of four tapes on computerized engine controls features two videos devoted exclusively to OBD II. Similarities and differences between today's major manufacturers systems (e.g., FORD, GM, Chrysler, Toyota, Honda, and Volkswagen) are also discussed alongside useful service tips for fast and effective troubleshooting and repair.
