

Specifications and drawings of patents relating to electricity issued by the U. S. Volume 36

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1886 Excerpt: ... the alum tends to unite the parts, and also, to a certain degree, prevents danger from combustion. The union of these materials is such as to produce 50 a good insulation of the wires, and such as to enable the composition to be readily cut or chipped out in inserting or removing wires or repairing the same. In its natural state the asphaltum is too tough and adhesive to be 55 easily chipped. The sulphur hardens it, so 40 that it becomes brittle to a considerable de grec, and can be readily chipped by a proper tool. The rosi n has a somewhat similar effect, and in addition it binds the asphaltum, so that it will uot break too easily. This mate-60 rial is comparatively cheap, and can be used for filling conduits of considerable size without involving great cost. The drawings show one method of applying; my invention. A shows a conduit or trough, 65 made of wood, plank, or any other suitable material, and attached to posts B B, the whole being sunken in the ground. The top a and one side, b, are removable for filling in the compound or reaching the wires. Doors C 70 are also preferably made at intervals for getting access to the interior. The wires D D are passed through the conduit by extending through shallow side grooves, //, made of sheet metal, or by passing around pegs 7#, pro-75 jecting from one side. The wires are separated some distance apart, so that when the material is filled in it surrounds and covers the wires in their separated condition. To apply the material, the wires are first ad-80 justed and the melted mass is then turned in, filling the whole passage, covering the wires, and insulating each one from the others. To remove or repair a wire, the box is opened on one side and the material

chipped 85 away by a suitable tool. The proportions of...
