

Managing the Construction Process: Estimating, Scheduling, and Project Control

Comprehensive and unique in its perspective, this text covers all areas of the Construction Management industry -- with a balanced focus on both theory and practicality. It helps students gain a knowledge of the Building Industry as a whole and the technical skills required to manage a construction project from conception through occupancy.* Focuses on the project control tools necessary to manage a project from conception through occupancy. * Introduces each of the four major sections with background theory and fundamentals, followed by practical applications. * Contains sidebars that highlight the opinions of respected industry people and that discuss topics of related interest. * Makes frequent use of illustrations throughout. * Provides chapter review questions and exercises. * Includes a major case study throughout.
