

## Making Spatial Decisions Using GIS and Lidar: A Workbook

The third book in the Making Spatial Decisions series, Making Spatial Decisions Using GIS and Lidar, focuses on scenario-based problem solving using an integrated workflow in ArcGIS for Desktop. The scenarios in Making Spatial Decisions Using GIS and Lidar feature lidar as the primary data source and lidar-related analysis as the primary skill focus. Lidar is a powerful, and increasingly popular, data source used to create elevation and terrain models with very high accuracy. Students and self-learners can use the exercises in this book to develop their GIS skills. Downloadable data and access to a 180-day free trial of ArcGIS are available on the Esri Press Book Resources webpage, [esripress.esri.com/bookresources](http://esripress.esri.com/bookresources). Instructor resources are available by contacting [esripress@esri.com](mailto:esripress@esri.com).
