

## Primary and Secondary Lead Processing: Proceedings of the International Symposium on Primary and Secondary Lead Processing, Halifax, Nova Scotia, August ... Canadian Institute of Mining and Metallurgy)

The lead smelting industry has been experiencing increasing pressures on several fronts - pressure to reduce energy usage, to reduce overall cost of production, to improve environmental conditions associated with production, to improve recycling of waste lead products and to develop new markets and applications. These pressures have resulted in the development of new low cost, energy efficient processes achieving new standards of process emissions.
