

## Producer Gas (Classic Reprint)

Excerpt from Producer Gas  
In the thirty odd years which I have devoted to the subject of Producer Gas and its applications, it has been my good fortune to make many pleasing friendships here and in other countries. Like most people, I have had my disappointments and troubles, but I have been greatly encouraged and assisted by the kind consideration and co-operation with which I have met. I feel especially indebted to Professor Ayrton, because he first gave me a helping hand in the most disinterested way. In 1881 I exhibited my apparatus at the Paris Electrical Exhibition, and there and then he volunteered to give a lecture on the subject in the Salle du Congres, in order to draw attention to what was being done, and to what it might lead to. I trust that the progress since made may be considered a justification of the interest he then awakened in the subject. I am also indebted to some of the makers of gas-engines. Not unnaturally they were at first disposed to think that it would not be to their interest to work their engines with producer gas, as it was so much weaker than town gas: the reputation of the engine itself was not then fully established, and they were fearful lest by using producer gas they might add to the difficulties with which they had to contend. That was in the days of small engines, when the consumption of gas was not great, and when the cost of the gas was of minor importance. Later they realised that the future of gas-power depended largely on producer gas, and I had the advantage of their co-operation. I am fully conscious that the growing importance of producer gas demands a more exhaustive treatment than I have been able to give it in the limited time at my disposal.
