

## Steam Using: Or Steam Engine Practice (Classic Reprint)

Excerpt from Steam Using: Or Steam Engine Practice It is believed that some knowledge of the circumstances attending the publication of this work, Steam Using, as well as its companion volume, Steam Making, will be of interest to the reader. The lamented author, Prof. Chas. A. Smith, had arranged with The American Engineer for the publication of the two works. While the first, Steam Making, was going through the columns of the Engineer, Professor Smith died, early in 1884, leaving also to the care of the Engineer the recently completed manuscript of Steam Using. To all who are familiar with the circumstances under which the books were written - the author suffering from a mortal illness and struggling against death to thus round out his life work, only giving up to die on their completion - will appreciate and value the more highly the broad and active experience thus crystallized. To Mr. John W. Weston, so long connected with this journal, and personally familiar with the author and his writings, has been delegated the pleasant duty of conducting these works through the various stages of bookmaking, with the result now presented. The task has not been without its difficulties, the most serious, perhaps, being the loss of the invaluable assistance of their author in the work of revision of matter and proof. As the author died without leaving a preface to his second volume, we desire to acknowledge for him the aid which he received from various engine builders and professional men throughout the country, which the following pages will disclose. It has been the aim, as far as possible, to preserve the exact style of the author, and it is believed that the facts and features presented in both books, the heirlooms of an admirable man, acknowledged to be profound and exact in his particular lines of work, will be held to cover whatever defects of minor importance may be encountered.
