The Oak Ridge Technical Information Center: A - DOE/OSTI chemist who worked on the Manhattan Project in World War II. The son Scott died on October 16, 2000 in Sumter, South Carolina at the age of 77. After World War II, Russell served as Chair and Professor of the Division of Science at Allen editor to the National Nuclear Energy Series. integral part of the community. **tARI b. - Krishikosh** (National Nuclear Energy Series, Manhattan Project Technical Section, Engineering Developments in the Gaseous Diffusion Process. (National Nuclear Energy Series, Manhattan Project Technical Section, Division II, Volume 16.) The S-50 Project was the Manhattan Projects effort to produce enriched uranium by liquid thermal diffusion during World War II. It was one of three technologies for uranium enrichment pursued by the Manhattan Project. The liquid thermal diffusion process was not one of the enrichment This was the only production-scale liquid thermal diffusion plant ever built. **Bulletin of the Atomic Scientists - Google Books Result** Engineering Developments in the Gaseous Diffusion Process , Volume 16 of National nuclear energy series.
